Recent Work

EdenHub Marketplace https://edenhub.co.za

Initial MVP for our B2C online marketplace, using WordPress, WooCommerce, Dokan, the Beans theme framework, Cloudflare & Digital Ocean. 100+ vendors & 600+ products. Apart from making it easy for local producers to get their products to market, we're also establishing a network of collection hubs to streamline the delivery process.

EdenHub https://edenhub.org

Gridsome site for the non-profit I co-founded, with information about the various projects we're tackling, email capture for updates and a blog for news. Cockpit CMS for the sites content, Mailchimp for the newsletter & WindiCSS for the front-end.

HealthCoach https://health-coach.co.za

Migrated my dads site from WordPress.com to a headless instance of Ghost to manage his sites content, blog & later subscriptions. I opted for Gridsome & Tailwind CSS for the front-end, Github & Vercel for the version control & hosting, with zero monthly cost.

SavvyGarden https://savvygarden..app

Weekend side-project to create a database of companion plants (that I coud use to get better organized on the farm). Airtable as the backend with Gridsome & WindiCSS for the front-end. Since the initial MVP I've refined the design, dark-mode, search filters & layout toggle for the results. Currently working on a serverless function to submit & modify plants, along with a headless shop using CommerceJS & Paystack.

DB Dynamics https://dbdynamics.vercel.app

Nuxt in static mode, with Prismic CMS to manage the content & the flexibility for the marketing team to create engaging case-studies & easily manage their service portfolio. Perfect scores on Google Page Speed (desktop & mobile).

Mzango https://mzango.vercel.app

Another side project I've been using as my learning playground for all things jamstack & headlless, aggregating content from various sources into a clean, easy-to-navigate & lightweight travel guide for South Africa.

Fairy Knowe Backpackers https://wildernessbackpackers.com

Website for a local backbackers, using Hygraph to manage the content and Gridsome with Tailwind for the front-end.

Drinking Games Guide https://dgg.pages.dev

Searchable directory of drinking games using Airtable for the content & Gridsome/Tailwind for the front-end.
